Preface xiii

CHAPTER 1 ■ Introduction 1

SECTION I Fundamentals

CHAPTER 2 ■ Diffusive Transport and Random Walks 11

2.1 DIFFUSIVE TRANSPORT 12

2.1.1 The Conservation Equation 13

2.1.2 Fick's Laws 14

2.1.3 Diffusive Spread of a Point Source 15

2.1.4 Diffusive Attenuation of Waves 17

2.2 ADVECTIVE AND DIFFUSIVE TRANSPORT 19

2.3 DIFFUSION IN MORE THAN ONE DIMENSION 20

2.4 RELATIVE IMPORTANCE OF ADVECTION AND DIFFUSION 22

2.5 THE MOTION OF A SINGLE MOLECULE 23

2.6 MONTE CARLO SIMULATION OF PARTICLE MOTION 27

2.7 CONCLUSION 28

2.8 EXERCISES 29

CHAPTER 3 ■ Stochastic Experiments and Probability Spaces 31

3.1 STOCHASTIC EXPERIMENTS 32

3.2 RANDOM VARIABLES 36

3.3 EXPECTATION IS INTEGRATION 38

3.4 INFORMATION IS A σ -ALGEBRA 40

3.5	CONDITIONAL EXPECTATIONS	42
3.5.1	Properties of the Conditional Expectation	44
3.5.2	Conditional Distributions and Variances	45
3.6	INDEPENDENCE AND CONDITIONAL INDEPENDENCE	47
3.7	LINEAR SPACES OF RANDOM VARIABLES	49
3.8	CONCLUSION	52
3.9	NOTES AND REFERENCES	53
3.9.1	The Risk-Free Measure	54
3.9.2	Convergence for Sequences of Events	54
3.9.3	Convergence for Random Variables	56
3.10	EXERCISES	60
CHAPTER 4 ■ Brownian Motion		63
<hr/>		
4.1	STOCHASTIC PROCESSES AND RANDOM FUNCTIONS	64
4.2	DEFINITION OF BROWNIAN MOTION	64
4.3	PROPERTIES OF BROWNIAN MOTION	66
4.4	FILTRATIONS AND ACCUMULATION OF INFORMATION	77
4.5	THE MARTINGALE PROPERTY	77
4.6	CONCLUSION	83
4.7	NOTES AND REFERENCES	83
4.8	EXERCISES	84
CHAPTER 5 ■ Linear Dynamic Systems		89
<hr/>		
5.1	LINEAR SYSTEMS WITH DETERMINISTIC INPUTS	90
5.2	LINEAR SYSTEMS IN THE FREQUENCY DOMAIN	91
5.3	A LINEAR SYSTEM DRIVEN BY NOISE	94
5.4	STATIONARY PROCESSES IN TIME DOMAIN	94
5.5	STATIONARY PROCESSES IN FREQUENCY DOMAIN	97
5.6	THE RESPONSE TO NOISE	99
5.7	THE WHITE NOISE LIMIT	101
5.8	INTEGRATED WHITE NOISE IS BROWNIAN MOTION	103
5.9	LINEAR SYSTEMS DRIVEN BY WHITE NOISE	105
5.10	THE ORNSTEIN-UHLENBECK PROCESS	107

5.11	THE NOISY HARMONIC OSCILLATOR	108
5.12	CONCLUSION	109
5.13	EXERCISES	111
SECTION II Stochastic Calculus		
CHAPTER	6 ■ Stochastic Integrals	117
<hr/>		
6.1	ORDINARY DIFFERENTIAL EQUATIONS DRIVEN BY NOISE	117
6.2	SOME EXEMPLARY EQUATIONS	120
6.2.1	Brownian Motion with Drift	120
6.2.2	The Double Well	120
6.2.3	Geometric Brownian Motion	121
6.2.4	The Stochastic van der Pol Oscillator	122
6.3	THE ITÔ INTEGRAL AND ITS PROPERTIES	123
6.4	A CAUTIONARY EXAMPLE: $\int_0^T B_S dB_S$	126
6.5	ITÔ PROCESSES AND SOLUTIONS TO SDES	129
6.6	RELAXING THE \mathcal{L}_2 CONSTRAINT	131
6.7	INTEGRATION WITH RESPECT TO ITÔ PROCESSES	132
6.8	THE STRATONOVICH INTEGRAL	133
6.9	CALCULUS OF CROSS-VARIATIONS	135
6.10	CONCLUSION	136
6.11	NOTES AND REFERENCES	137
6.11.1	The Proof of Itô Integrability	137
6.11.2	Weak Solutions to SDE's	138
6.12	EXERCISES	138
CHAPTER	7 ■ The Stochastic Chain Rule	141
<hr/>		
7.1	THE CHAIN RULE OF DETERMINISTIC CALCULUS	142
7.2	TRANSFORMATIONS OF RANDOM VARIABLES	142
7.3	ITÔ'S LEMMA: THE STOCHASTIC CHAIN RULE	143
7.4	SOME SDE'S WITH ANALYTICAL SOLUTIONS	146
7.4.1	The Ornstein-Uhlenbeck Process	148
7.5	DYNAMICS OF DERIVED QUANTITIES	150
7.5.1	The Energy in a Position-Velocity System	150

7.5.2	The Cox-Ingersoll-Ross Process and the Bessel Processes	151
7.6	COORDINATE TRANSFORMATIONS	152
7.6.1	Brownian Motion on the Circle	153
7.6.2	The Lamperti Transform	153
7.6.3	The Scale Function	154
7.7	TIME CHANGE	156
7.8	STRATONOVICH CALCULUS	159
7.9	CONCLUSION	162
7.10	NOTES AND REFERENCES	163
7.11	EXERCISES	163
CHAPTER 8 ■ Existence, Uniqueness, and Numerics		167
<hr/>		
8.1	THE INITIAL VALUE PROBLEM	168
8.2	UNIQUENESS OF SOLUTIONS	168
8.2.1	Non-Uniqueness: The Falling Ball	168
8.2.2	Local Lipschitz Continuity Implies Uniqueness	169
8.3	EXISTENCE OF SOLUTIONS	172
8.3.1	Linear Bounds Rule Out Explosions	173
8.4	NUMERICAL SIMULATION OF SAMPLE PATHS	175
8.4.1	The Strong Order of the Euler-Maruyama Method for Geometric Brownian Motion	176
8.4.2	Errors in the Euler-Maruyama Scheme	177
8.4.3	The Mil'shtein Scheme	178
8.4.4	The Stochastic Heun Method	180
8.4.5	The Weak Order	181
8.4.6	A Bias/Variance Trade-off in Monte Carlo Methods	183
8.4.7	Stability and Implicit Schemes	184
8.5	CONCLUSION	186
8.6	NOTES AND REFERENCES	187
8.6.1	Commutative Noise	188
8.7	EXERCISES	189
CHAPTER 9 ■ The Kolmogorov Equations		191
<hr/>		
9.1	BROWNIAN MOTION IS A MARKOV PROCESS	192

9.2	DIFFUSIONS ARE MARKOV PROCESSES	193
9.3	TRANSITION PROBABILITIES AND DENSITIES	194
9.3.1	The Narrow-Sense Linear System	197
9.4	THE BACKWARD KOLMOGOROV EQUATION	198
9.5	THE FORWARD KOLMOGOROV EQUATION	201
9.6	DIFFERENT FORMS OF THE KOLMOGOROV EQUATIONS	203
9.7	DRIFT, NOISE INTENSITY, ADVECTION, AND DIFFUSION	204
9.8	STATIONARY DISTRIBUTIONS	206
9.9	DETAILED BALANCE AND REVERSIBILITY	209
9.10	CONCLUSION	212
9.11	NOTES AND REFERENCES	213
9.11.1	Do the Transition Probabilities Admit Densities?	213
9.11.2	Eigenfunctions, Mixing, and Ergodicity	215
9.11.3	Reflecting Boundaries	217
9.11.4	Girsanov's Theorem	219
9.11.5	Numerical Computation of Transition Probabilities	220
9.11.5.1	Solution of the Discretized Equations	223
9.12	EXERCISES	224

SECTION III Applications

CHAPTER 10 ■ State Estimation 233

10.1	RECURSIVE FILTERING	234
10.2	OBSERVATION MODELS AND THE STATE LIKELIHOOD	235
10.3	THE RECURSIONS: TIME UPDATE AND DATA UPDATE	238
10.4	THE SMOOTHING FILTER	241
10.5	SAMPLING TYPICAL TRACKS	243
10.6	LIKELIHOOD INFERENCE	244
10.7	THE KALMAN FILTER	246
10.7.1	Fast Sampling and Continuous-Time Filtering	249
10.7.2	The Stationary Filter	251
10.7.3	Sampling Typical Tracks	252
10.8	ESTIMATING STATES AND PARAMETERS AS A MIXED-EFFECTS MODEL	253

10.9	CONCLUSION	256
10.10	NOTES AND REFERENCES	257
10.11	EXERCISES	258
CHAPTER 11 ■ Expectations to the Future		261
<hr/>		
11.1	DYNKIN'S FORMULA	262
11.2	EXPECTED EXIT TIMES FROM BOUNDED DOMAINS	263
11.2.1	Exit Time of Brownian Motion with Drift on the Line	263
11.2.2	Exit Time from a Sphere, and the Diffusive Time Scale	265
11.2.3	Exit Times in the Ornstein-Uhlenbeck Process	265
11.2.4	Regular Diffusions Exit Bounded Domains in Finite Time	267
11.3	ABSORBING BOUNDARIES	269
11.4	THE EXPECTED POINT OF EXIT	271
11.4.1	Does a Scalar Diffusion Exit Right or Left?	272
11.5	RECURRENCE OF BROWNIAN MOTION	273
11.6	THE POISSON EQUATION	275
11.7	ANALYSIS OF A SINGULAR BOUNDARY POINT	276
11.8	DISCOUNTING AND THE FEYNMAN-KAC FORMULA	279
11.8.1	Pricing of Bonds	281
11.8.2	Darwinian Fitness and Killing	282
11.8.3	Cumulated Rewards	284
11.8.4	Vertical Motion of Zooplankton	285
11.9	CONCLUSION	286
11.10	NOTES AND REFERENCES	288
11.11	EXERCISES	288
CHAPTER 12 ■ Stochastic Stability Theory		291
<hr/>		
12.1	THE STABILITY PROBLEM	292
12.2	THE SENSITIVITY EQUATIONS	293
12.3	STOCHASTIC LYAPUNOV EXPONENTS	295
12.3.1	Lyapunov Exponent for a Particle in a Potential	298
12.4	EXTREMA OF THE STATIONARY DISTRIBUTION	299

12.5	A WORKED EXAMPLE: A STOCHASTIC PREDATOR- PREY MODEL	301
12.6	GEOMETRIC BROWNIAN MOTION REVISITED	306
12.7	STOCHASTIC LYAPUNOV FUNCTIONS	308
12.8	STABILITY IN MEAN SQUARE	311
12.9	STOCHASTIC BOUNDEDNESS	313
12.10	CONCLUSION	316
12.11	NOTES AND REFERENCES	317
12.12	EXERCISES	317
CHAPTER 13 ■ Dynamic Optimization		321
<hr/>		
13.1	MARKOV DECISION PROBLEMS	322
13.2	CONTROLLED DIFFUSIONS AND PERFORMANCE OBJECTIVES	325
13.3	VERIFICATION AND THE HAMILTON-JACOBI-BELLMAN EQUATION	326
13.4	PORTFOLIO SELECTION	328
13.5	MULTIVARIATE LINEAR-QUADRATIC CONTROL	329
13.6	STEADY-STATE CONTROL PROBLEMS	331
	13.6.1 Stationary LQR Control	333
13.7	DESIGNING AN AUTOPILOT	335
13.8	DESIGNING A FISHERIES MANAGEMENT SYSTEM	337
13.9	A FISHERIES MANAGEMENT PROBLEM IN 2D	339
13.10	OPTIMAL DIEL VERTICAL MIGRATIONS	341
13.11	CONCLUSION	343
13.12	NOTES AND REFERENCES	345
	13.12.1 Control as PDE-Constrained Optimization	346
	13.12.2 Numerical Analysis of the HJB Equation	346
13.13	EXERCISES	351
CHAPTER 14 ■ Perspectives		353
<hr/>		
	Bibliography	355
	Index	361
